

Unequaled *flexibility*
in Perimeter Protection

Correctional Services

*Covert, easy to service
and inexpensive to maintain,
ENCLOSURE™ sensors offer the
ultimate in correctional service
perimeter-protection versatility.*

You need electronic perimeter security that is reliable, simple to maintain and inexpensive to service. We understand that. That's why we have developed ENCLOSURE™, a system that uses low-cost coaxial cable and requires no external parts or additional on-site hardware.

ENCLOSURE™: Its strength is in its simplicity. A coaxial cable is installed around the perimeter of the building, property or assets being protected. This cable emits, or "leaks" multiple harmless radio-frequency signals. A strategically placed receiver monitors the signal, triggering an alarm when there is a disturbance. With a system designed to compensate for most environmental instabilities such as wind movement, snow accumulation and small animals, nuisance alarms are virtually eliminated.

www.auratek.net

ENCLOSURE™ by Auratek Security Inc. offers versatility you will not find in any other system available today. Whether it's a rooftop or wall-mounted application, or a totally discreet, buried-cable deployment, our perimeter protection gives you peace of mind.

Keep your facilities secure

Rooftop and wall-mounted applications

Tractable

It can follow the shape of any roof, wall or area without leaving blind spots.

Discreet

Its design offers maximum protection with a minimum change to the outward appearance of your facilities.

Reliable

The system is calibrated to resist alarm activation by small animals or weather.

Terrain applications

Versatile

It can be buried in concrete, asphalt, gravel or soil. As well, it can be secured by using wood, stones, bricks, PVC material or plastic, sandbags or any other non-metallic anchoring system.

Adaptable

Over hills, through dense bush, around corners – it can follow the shape of any terrain.

Reliable

It is designed to minimize nuisance alarms triggered by weather or small animals.

Covert

This increases the chances of detection – without the escapee knowing it – and decreases the chances of the system being defeated.

Because ENCLOSURE™ uses low-cost, coaxial cable that is easy to use and simple to maintain, it is ideally suited for the correction industries. The most versatile product on the market, ENCLOSURE™ can be installed on a wall, along a surface, on a rooftop, underground, on a non-metallic support or even on top of a fence.

System enhancements

ENCLOSURE™ offers you a complete perimeter-protection solution including:

- **Portable perimeter-security systems**
- **Graphic user interface**
- **Acoustic fence sensors**

See the manufacturer or your authorized dealer for details.
