

Unequaled *flexibility*
in Perimeter Protection

Utilities Sector

Covert, inexpensive to operate and reliable, ENCLOSURE™ sensors offer the ultimate in perimeter-protection versatility.

Thousands, perhaps millions, of people depend on you to provide reliable and uninterrupted service. When they flip the switch, open the valve or turn on the faucet, you need to be there – without fail. You need an electronic perimeter security that is reliable, too. We understand that. That's why we have developed ENCLOSURE™, a low-cost system that can be virtually invisible, requires no external parts or additional on-site hardware and operates even in the most harsh environments.

ENCLOSURE™: Its strength is in its simplicity. A coaxial cable is installed around the perimeter of the building, property or assets being protected. This cable emits, or "leaks" multiple harmless radio-frequency signals. A strategically placed receiver monitors the signal, triggering an alarm when there is a disturbance. With a system designed to compensate for most environmental instabilities such as wind movement, snow accumulation and small animals, nuisance alarms are virtually eliminated.

ENCLOSURE™ by Auratek Security Inc. offers versatility you will not find in any other system available today. No matter how remote the location or how rough the environment, our perimeter protection gives you the security you need.

Keep your utilities secure

Rooftop and wall-mounted applications

Tractable

It can follow the shape of any roof, wall or area without leaving blind spots.

Discreet

Its design offers maximum protection with a minimum change to the outward appearance of your facilities.

Reliable

The system is calibrated to resist alarm activation by small animals or weather.

Because ENCLOSURE™ uses low-cost, coaxial cable that is easy to use and simple to maintain, it is ideally suited for the utilities sector. The most versatile product on the market, ENCLOSURE™ can be installed on a wall, along a surface, on a rooftop, underground, on a non-metallic support or even on top of a fence.

Terrain applications

Versatile

It can be buried in concrete, asphalt, gravel or soil. As well, it can be secured by using wood, stones, bricks, PVC material or plastic, sandbags or any other non-metallic anchoring system.

Adaptable

Over hills, through dense bush, around corners – it can follow the shape of any terrain.

Reliable

It is designed to minimize nuisance alarms triggered by weather or small animals.

Covert

This increases the chances of detection – without the intruder knowing it – and decreases the chances of the system being defeated.

System enhancements

ENCLOSURE™ offers you a complete perimeter-protection solution including:

- **Portable perimeter-security systems**
- **Graphic user interface**
- **Acoustic fence sensors**

See the manufacturer or your authorized dealer for details.
