

Unequaled *flexibility*
in Perimeter Protection

Protection Services

Portable, rapidly deployable and easy to use, ENCLOSURE™ sensors offer the ultimate in perimeter-protection versatility.

When you need perimeter protection, you need it in a hurry. It has to be simple to use and ready to go in minutes, not hours. At Auratek, we understand that. That's why we have developed ENCLOSURE™, a portable system that uses low-cost, coaxial cable and requires no external parts and no additional on-site hardware.

ENCLOSURE™: Its strength is in its simplicity. A coaxial cable is installed around the perimeter of the building, property or assets being protected. This cable emits, or "leaks" multiple harmless radio-frequency signals. A strategically placed receiver monitors the signal, triggering an alarm when there is a disturbance. With a system designed to compensate for most environmental instabilities such as wind movement, snow accumulation and small animals, nuisance alarms are virtually eliminated.

www.auratek.net

ENCLOSURE™ by Auratek Security Inc. offers versatility you will not find in any other portable system available today. Whether you are securing people, a building, equipment or aircraft, our perimeter protection gives you the coverage – and the peace of mind – you need.

Keep your people and property secure

Always on the job

Versatile

It can be buried in concrete, asphalt, gravel or soil. It can be installed on a wall, along a surface, on a rooftop, underground, on a non-metallic support or even on top of a fence.

Discreet

Its design offers maximum protection with minimum visual impact.

Covert

This assures an increased chance of detection and a decreased chance of the system being defeated.

Reliable

The system is calibrated to resist alarm activation by small animals or weather.

Adaptable

Over hills, through dense bush, around corners – it can follow the shape of any terrain without leaving blind spots.

Easy to set up

It can be installed by a non-technical person in less than 15 minutes.

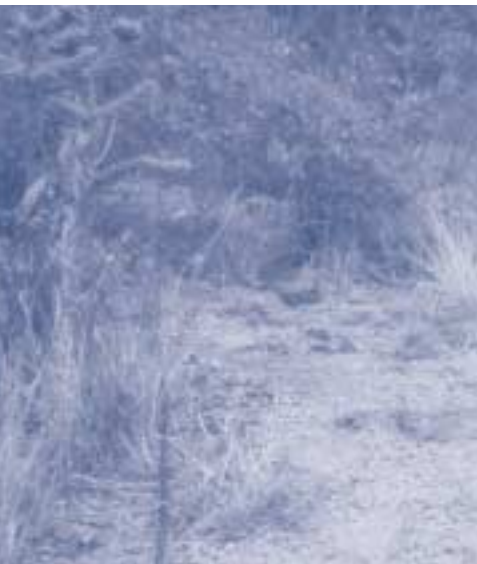

Transportable

Light weight and easy to carry.

Independent

Both rechargeable batteries and solar panels are available to ensure extended usability.

If you need temporary perimeter security, look no further than the ENCLOSURE™ Portable Detection Systems. With all the strength, accuracy and reliability of Auratek's fixed systems, they are just what you need to protect your people and your assets.

Because ENCLOSURE™ uses low-cost, coaxial cable, it is ideally suited for the protection-services industry. The most versatile product on the market, ENCLOSURE™ can be installed on a wall, along a surface, on a rooftop, underground, on a non-metallic support or even on top of a fence. It can even be buried in gravel or soil for covert operations. The portable and reusable nature of the product makes it an ideal, low-cost solution to your tactical perimeter-protection needs.

Also available

ENCLOSURE™ perimeter protection is also available as a fixed system. For lengthy perimeters, the ENCLOSURE™ system is the ideal blend of versatility, discretion, system performance and cost.

See the manufacturer or your authorized dealer for details.
