

Unequaled *flexibility*
in Perimeter Protection

Armed Forces

Portable, rapidly re-deployable and easy to use in any environment, ENCLOSURE™ fixed and portable security systems offer the ultimate in tactical perimeter-protection versatility.

When you need perimeter protection, you need it now. ENCLOSURE™ portable systems can be laid in minutes and require no external parts or additional on-site hardware. Our fixed systems are just as versatile, reliable, discreet and easy to maintain.

ENCLOSURE™: Its strength is in its simplicity. A coaxial cable is installed around the perimeter of the building, property or assets being protected. This cable emits, or "leaks" multiple harmless radio-frequency signals. A strategically placed receiver monitors the signal, triggering an alarm when there is a disturbance. With a system designed to compensate for most environmental instabilities such as wind movement, snow accumulation and small animals, nuisance alarms are virtually eliminated – even in harsh environments.

ENCLOSURE™ by Auratek Security Inc. offers versatility you will not find in any other perimeter-protection systems available today. Whether you need the long-term security of a fixed system or the adaptability of a portable solution, our system gives you the coverage – and the security – you need.

Keep your personnel and assets secure

Anywhere, anytime

Versatile

Fixed systems can be buried in concrete, asphalt, gravel or soil. They can be installed on a wall, along a surface, on a rooftop, underground, on a non-metallic support or even on top of a fence. Portable systems lay down almost anywhere, in just minutes.

Discreet

Both systems' designs offer maximum protection with minimum visual impact.

Covert

This assures an increased chance of detection and a decreased chance of the system being defeated.

Reliable

The systems are calibrated to resist alarm activation by small animals or weather.

Adaptable

Over hills, through dense bush, around corners – our systems can follow the shape of any terrain without leaving blind spots.

Portability

Our portable system can be installed by a non-technical person in less than 15 minutes. It's light weight and easy to carry. Both rechargeable batteries and solar panels are available to ensure extended usability.

Because ENCLOSURE™ uses low-cost, easy-to-maintain coaxial cable, it is ideally suited for the armed forces. The most versatile product on the market, ENCLOSURE™ can be wall-mounted, laid along any terrain or even buried for covert operations. The redeployable nature of both our fixed and portable systems make them an ideal, low-cost solution to your tactical perimeter-protection needs.

System enhancements

ENCLOSURE™ offers you a complete perimeter-protection solution including:

- Fixed and portable perimeter-security systems
- Graphic user interface
- Acoustic fence sensors

See the manufacturer or your authorized dealer for details.
